

DRAINAGE CALCULATIONS, HYDRAULICS & HYDROLOGY REPORT

**1492 Hartford – New London Turnpike (CT Route 85)
Montville, CT**

April 8th, 2024

DRAINAGE HYDRAULICS AND HYDROLOGY REPORT

1492 Hartford – New London Turnpike (CT Route 85) Montville, CT

EXISTING CONDITIONS

The site is approximately 5.62 acres in area and is shown on the Existing Conditions Survey (Sheet 1 of the site plans). The site has frontage on Hartford – New London Turnpike (Route 85). There are approximately 0.38 acres of wetlands on the site.

PROPOSED DEVELOPMENT

The project proposes the development of a processing, material storage, and equipment storage facility. There will be no free standing buildings on the site but there will be several storage bays and a construction trailer.

The 5.62 acres site contains wetlands as shown on sheet 1. Of the 5.62 acres, 4.08 acres will be disturbed during the development process. There will be no disturbance within the wetlands or upland review area.

EXISTING AND PROPOSED HYDRAULICS

The stormwater management system has been designed to provide for zero increase in peak stormwater discharge from the site. The project has been designed to actually result in a decrease in the peak stormwater rates leaving the project site. The proposed stormwater water quality basin will provide treatment of the runoff from the proposed site.

The current site is divided into two, existing, drainage areas:

| | |
|--------------------------|------------|
| Existing Drainage Area 1 | 2.98 Acres |
| Existing Drainage Area 2 | 2.64 Acres |

The development of the proposed site will result in two drainage areas:

| | |
|--------------------------|------------|
| Proposed Drainage Area 1 | 4.08 Acres |
| Proposed Drainage Area 2 | 1.54 Acres |

Proposed Drainage Area 1 contains the developed site. The stormwater runoff from this area will be treated by the water quality basin in the northwestern corner of the site. Proposed Drainage Area 2 contains the wetlands and upland review area and will remain undeveloped.

Both the existing and the proposed conditions for the development site have been analyzed for the 2-year, 10-year, 25-year, 50-year, and 100 year design storms using the Rational Method.

Drainage Area 1

| | 2 Year | 10 Year | 25 Year | 50 Year | 100 Year |
|-----------------|----------|----------|----------|----------|----------|
| Existing | 2.21 cfs | 3.32 cfs | 4.00 cfs | 4.50 cfs | 5.04 cfs |
| Proposed | 0.00 cfs | 0.00 cfs | 0.00 cfs | 0.00 cfs | 0.00 cfs |

Drainage Area 2

| | 2 Year | 10 Year | 25 Year | 50 Year | 100 Year |
|-----------------|----------|----------|----------|----------|----------|
| Existing | 1.96 cfs | 2.94 cfs | 3.54 cfs | 3.99 cfs | 4.46 cfs |
| Proposed | 0.70 cfs | 1.05 cfs | 1.27 cfs | 1.43 cfs | 1.60 cfs |

EROSION & SEDIMENTATION CONTROL

The 2002 CT Guidelines for Soil Erosion & Sedimentation Control applies to the construction phase of the project. A detailed erosion and sediment control plan has been provided in the site development plans. The proposed stormwater water quality basin has been designed to function as sedimentation traps during stabilization.

The first calculation required by the Guidelines is for the sediment storage volume (SSV). The sediment storage volume is the calculation for one year of predicted sediment load. The required SSV calculation for the temporary sediment trap is shown below.

Drainage Area 1A

$$SSV = A(134CY/Acre)$$

$$A = 4.08 \text{ ACRE}$$

$$SSV = 546.72 \text{ CY} = \underline{\mathbf{14,760 \text{ CF}}}$$

The second calculation required by the Guidelines is for wet storage volume (WSV). The wet storage volume is the volume in the basin that is located below the bottom of the riprap for the level spreader outlet of the basin. The volume of the wet storage is required to be half of the required SSV. The required wet storage volume is shown below along with the dry storage volumes (DSV).

Drainage Area 1A

$$WSV = DSV = SSV/2$$

$$= \underline{\mathbf{7,380 \text{ CF}}}$$

The required and provided storage for each basin are as follows:

Drainage Area 1 (Bottom of Riprap Elev. = 206.5)

Sedimentation Trap

| | |
|---|--------------------------|
| 7,380 CF of Wet Storage Volume Required | 11,965 CF Provided |
| 7,380 CF of Dry Storage Volume Required | 10,260 CF Provided |
| 14,760 CF of Sediment Storage Volume Required | 22,225 CF Total Provided |

CONNECTICUT STORMWATER QUALITY MANUAL

The Connecticut 2004 Stormwater Quality Manual (Manual) applies to the post construction phase, for the operation of the facility. The temporary sediment traps have been designed to function as water quality basins after the site is stabilized. They all meet the criteria of the Connecticut Stormwater Quality Manual for a Water Quality Basin.

Drainage Area 1

$$WQV = (1')(R)(A)/12$$

$$A = 4.08 \text{ Acre}$$

$$R = 0.05 + 0.009(I)$$

$$I = 0.05 \text{ Acres} / 4.08 \text{ Acres} = 0.012 \quad (1.2\%)$$

$$R = 0.061$$

$$WQV = 0.021 \text{ Ac-Ft} = 903.9 \text{ CF (Required)}$$

$$11,965 \text{ CF (Provided)}$$

Once development of the site is completed, there will be a decrease in runoff from the site. The temporary sedimentation basin provides ample wet and dry storage volume to meet and exceed the requirements of the 2002 CT Guidelines for Soil & Sedimentation Control. Likewise, Water Quality Basin meets and exceeds the post construction requirements of the Connecticut 2004 Stormwater Quality Manual.

Hydrograph Summary Report

Proposed Area 2

Hydrograph type = Rational
 Storm frequency = 50 yrs
 Time interval = 1 min
 Drainage area = 1.540 ac
 Intensity = 4.633 in/hr
 IDF Curve = GSD-60 NOAA.IDF

Peak discharge = 1.427 cfs
 Time to peak = 22 min
 Hyd. volume = 1,884 cuft
 Runoff coeff. = 0.2
 Tc by TR55 = 22.00 min
 Asc/Rec limb fact = 1/1

Hydrograph Summary Report

Hydraflow Hydrographs Extension for AutoCAD® Civil 3D® 2009 by Autodesk, Inc. v6.066

| Hyd. No. | Hydrograph type (origin) | Peak flow (cfs) | Time interval (min) | Time to peak (min) | Hyd. volume (cuft) | Inflow hyd(s) | Maximum elevation (ft) | Total strge used (cuft) | Hydrograph description | |

¹ Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS). Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values. Please refer to NOAA Atlas 14 document for more information.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: State of Connecticut, Eastern Part
Survey Area Data: Version 1, Sep 15, 2023

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jun 14, 2022—Oct 6, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

| Map Unit Symbol | Map Unit Name | Acres in AOI | Percent of AOI |
|------------------------------------|---|--------------|----------------|
| 3 | Ridgebury, Leicester, and Whitman soils, 0 to 8 percent slopes, extremely stony | 0.3 | 5.0% |
| 29A | Agawam fine sandy loam, 0 to 3 percent slopes | 1.7 | 29.6% |
| 84B | Paxton and Montauk fine sandy loams, 3 to 8 percent slopes | 1.8 | 31.7% |
| 84C | Paxton and Montauk fine sandy loams, 8 to 15 percent slopes | 2.0 | 33.7% |
| Totals for Area of Interest | | 5.8 | 100.0% |
