**PROPOSED REVISIONS**

[illegible]

1. The first step is to identify the problem. In this case, the problem is that the system is not working properly.

[illegible][illegible]

The following table shows the results of the regression analysis for the dependent variable "Number of children" (N = 1,000). The independent variables are "Age", "Gender", "Marital Status", "Income", and "Education". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

| Variable       | Coefficient | Standard Error | t-statistic | p-value |
|----------------|-------------|----------------|-------------|---------|
| Age            | 0.05        | 0.01           | 5.00        | 0.000   |
| Gender         | 0.10        | 0.05           | 2.00        | 0.040   |
| Marital Status | 0.20        | 0.02           | 10.00       | 0.000   |
| Income         | 0.02        | 0.01           | 2.00        | 0.040   |
| Education      | 0.01        | 0.01           | 1.00        | 0.317   |

The regression equation is:  $\text{Number of children} = 0.05 \times \text{Age} + 0.10 \times \text{Gender} + 0.20 \times \text{Marital Status} + 0.02 \times \text{Income} + 0.01 \times \text{Education} + \text{Constant}$ .
